A Smart Multi-Seller Marketplace for the Iraqi Market

By: Shakir Bashar

---

1. Problem

- ➔ When buying products online in Iraq, the exact same item often sells at wildly different prices depending on which shop or page you check.
- ➔ Buyers waste hours scrolling through unverified pages and duplicate listings, never quite sure who to trust with their money.
- ➔ Local shop owners across different retail sectors want to sell online, but paying an agency to build a custom app or website is far too expensive and complicated.

2. Innovation

- ➔ A smart matching system that groups identical products from different sellers together, showing buyers the best price and top-rated shop at a glance.
- ➔ Real-time merchant alerts that notify shop owners when their prices are higher than competitors on the same product, helping them adjust to stay competitive.
- ➔ Built specifically for local buying habits, integrating Cash on Delivery, FastPay, Qi Card, and direct dispatch to local courier services.

3. Opportunity

- ➔ The local market sells a huge variety of products over social media, but with zero organization—leaving a massive opening for a unified platform people can rely on.
- ➔ Because the platform is built entirely in-house, grant funding from initiatives like the GIZ Entrep. Program won't be wasted on software agencies; it goes straight into merchant onboarding and customer growth.
- ➔ Rapid seller sign-ups are driven by offering a fair, tiered fee structure instead of taking massive commission cuts: 5% for items under 9,000 IQD, a flat 1,000 IQD for items between 10,000 and 99,000 IQD, and 2% for items between 100,000 and 499,000 IQD.

4. Value

- ➔ **For Everyday Shoppers:** Saves real money and hours of searching, making buyers feel **smart** and **relieved** that they finally secured the best deal without the fear of being tricked or overpaying.
- ➔ **For Small Shop Owners:** Brings in new daily orders through a simple digital storefront, making sellers feel **confident** and **empowered** to grow their business without stressing over complicated tech or heavy fees.
- ➔ **For the Community:** Organizes the messy online market into a reliable system, bringing a shared feeling of **safety** and **trust** by supporting honest local shops and making digital shopping a happy, stress-free experience.
